Although the significance of '9/11' is subject to debate, it is symbolic of a general sentiment of discontinuity whereby society is vulnerable to undefined and highly disruptive events. Recent catalysts of this sentiment are eye-catching developments such as the SARS (Severe Acute Respiratory Syndrome) and bird flu outbreaks, the Enron and Parmalat scandals, political assassinations in Sweden and the Netherlands, regime changes in Iraq and Afghanistan, and terrorist attacks in Bali, Istanbul, Madrid, and various parts of the Middle East. However, recent discontinuities should not be seen as evidence that discontinuities occur more frequently now than they did before. Looking back in history we see that disruptive processes are common. For example, 25 years ago few Europeans would have predicted the upcoming upheavals on their own continent: the collapse of communism, Berlin as the capital of a

reunited Germany, the wars in the former Yugoslavia, the single European currency, and the near doubling of the number of European Union member states. Changes elsewhere have been no less discontinuous and unforeseen: the fall of the Asian tigers, the emergence of the Internet and mobile telecommunication, and the presidency of Nelson Mandela. Societal discontinuity is a relatively new area of concern in policy development. Since the 1970s the consideration of change and discontinuity has gained some ground over predictive forecasting, which tended to reason from continuous developments and linear processes. Rather than making forecasting the future, it has become popular to use scenarios as a manner to consider several possible futures. Scenarios are coherent descriptions of alternative hypothetical futures that reflect different perspectives on past, present, and future developments, which can serve as a basis for action. Scenario development aims to combine analytical knowledge with creative thinking in an effort to capture a wide range of possible future developments in a limited number of outlooks. Scenario development assumes that the future is uncertain and the directions in which current developments might range from the conventional to the revolutionary. In theory, scenario development is a way to consider future discontinuity. However, there are indications that the theoretical promise is not reflected in scenario practice. Research has shown that scenarios do not consider the idea of discontinuity as a matter of course. In our research, we found that a scenario study would benefit from efforts to create and foster a 'culture of curiosity' for exploring the future and the possible discontinuities rather than simply commissioning a scenario study to provide insights about the future. Only then can one read the writing on the wall of future developments.

The Curriculum Topic Study (CTS) process provides a professional development strategy that links mathematics standards and research to curriculum, instruction, and assessment.

This book constitutes the refereed joint proceedings of seven international workshops held in conjunction with the 25th International Conference on Conceptual Modeling, ER 2006, in Tucson, AZ, USA in November 2006. The 39 revised full papers presented together with the outlines of three tutorials were carefully reviewed and selected from 95 submissions.

First published in 1998. Routledge is an imprint of Taylor & Francis, an informa company.

This is the only textbook to cover the totality of perioperative nursing, including infection control and risk management. Other areas of perioperative nursing not addressed in other texts are practice development, management, advanced practice and the roles of key team members. Comprehensive and accessible, this book is set out in three parts: the changing role of the nurse; principles of perioperative practice; and management of the changing environment of care.

Effective Healthcare Leadership integrates theory and practice to distil the reality of healthcare leadership today. It addresses the context and explores strategies for leadership and examines the leadership skills required to implement and sustain developments in healthcare. Section one examines the contemporary context and challenges of healthcare leadership. Section two offers opportunities through the CLINLAP/LEADLAP model to see how modern management ideas, tools and techniques are used effectively in leadership development. Section three examines the role of leadership in implementing change and improving practice in different contexts of care. The final section explores future challenges in leadership.
