Experience This program will provide a better teaching and learning experience--for you and your students. It provides:

- Individualized Coaching: MasteringEngineering emulates the instructor's office-hour environment using self-paced individualized coaching.
- Problem Solving: A large variety of problem types stress practical, realistic situations encountered in professional practice.
- Visualization: The photorealistic art program is designed to help students visualize difficult concepts.
- Review and Student Support: A thorough end of chapter review provides students with a concise reviewing tool.
- Accuracy: The accuracy of the text and problem solutions has been thoroughly checked by four other parties.

Sets the standard for introducing the field of comparative politics This text begins by laying out a proven analytical framework that is accessible for students new to the field. The framework is then consistently implemented in twelve authoritative country cases, not only to introduce students to what politics and governments are like around the world but

to also understand the importance of their similarities and differences. Written by leading comparativists and area study specialists, Comparative Politics Today helps to sort through the world's complexity and to recognize patterns that lead to genuine political insight. MyPoliSciLab is an integral part of the Powell/Dalton/Strom program. Explorer is a hands-on way to develop quantitative literacy and to move students beyond punditry and opinion. Video Series features Pearson authors and top scholars discussing the big ideas in each chapter and applying them to enduring political issues. Simulations are a game-like opportunity to play the role of a political actor and apply course concepts to make realistic political decisions. **ALERT:** Before you purchase, check with your instructor or review your course syllabus to ensure that you select the

application of the important fundamental topics of these subjects that are often used in many engineering disciplines. The development emphasises the importance of satisfying equilibrium, compatibility of deformation, and material behavior requirements. The hallmark of the book, however, remains the same as the author's unabridged versions, and that is, strong emphasis is placed on drawing a free-body diagram, and the importance of selecting an appropriate coordinate system and an associated sign convention whenever the equations of mechanics are applied. Throughout the book, many analysis and design applications are presented, which involve mechanical elements and structural members often encountered in engineering practice.
